EDUCATION

University of Connecticut Storrs, CT,

Expected May 2028

Bachelor of Science in Materials Science & Engineering

Relevant Courses: Thermodynamics, Materials Characterization (MSE 4003)

TECHNICAL SKILLS

Manufacturing: Lean Manufacturing, Six Sigma (DMAIC), Root Cause Analysis, Process Documentation, Work Instructions

Materials: Corrosion Testing, Failure Analysis, Metallography, Microstructure Analysis, Surface Roughness

Software: Excel, Minitab, MATLAB, Python, Microsoft Project, Visio

PROFESSIONAL EXPERIENCE

Entegris R&D Co-op (Extended) – Danbury, CT

Jan 2026 – Aug 2026

- Led root cause investigation of recurring manufacturing defects, implementing corrective actions that reduced estimated scrap by ~12%.
- Applied Six Sigma (DMAIC) methodologies to reduce process variability by 6%, improving manufacturing measurement consistency and repeatability.
- Installed and qualified inspection equipment for manufacturing quality assurance, enabling standardized surface-roughness characterization of high-purity gas cylinders.
- Designed and standardized process documentation for a high-purity gas system, collaborated with cross-functional teams on equipment design and scale-up and, led the request-for-quotation (RFQ) process for new system components.

Undergraduate Research Assistant- Institute of Materials Science & Sustainability, Storrs CT

Aug 2025 – Present

- Perform wet/dry cyclic accelerated corrosion testing (ASTM standards) on steel specimens; ensure data integrity through meticulous documentation and adherence to quality control procedures.
- Analyze corrosion-rate data for 10+ alloy variants; deliver technical recommendations for material selection based on reliability and performance.

Metallurgy Research Assistant - Institute of Materials Science & Sustainability, Storrs CT

May 2025 – Aug 2025

- Prepared metallographic specimens via heat treatment, grinding, and polishing, exceeding industry QC standards through rigorous process control.
- Conducted microstructure analysis to correlate grain morphology with mechanical stability; contributed to failure analysis and material optimization.

Biomedical Research Intern – Hugo P. Quintero Labs, Storrs, CT

Sep 2024 – Feb 2025

- Optimized data-analysis algorithms (MATLAB/Python), increasing processing speed by 30% and improving measurement accuracy by 15%.

TECHNICAL PROJECTS & PUBLICATIONS

Electrochemical Catalyst Synthesis – Independent Study

Jun 2025 – Aug 2025

- Designed and executed experiments for electrochemical synthesis of novel catalysts; evaluated performance using cyclic voltammetry and EIS.

(PMMA): Structure, Processing, and Applications in Biomedicine and Semiconductor Engineering

Spring 2026

- Authored a 12-page literature review on PMMA's use as an e-beam resist in semiconductor lithography, including chain scission mechanisms and resolution limits.

LEADERSHIP

Senator – National Society of Black Engineers (NSBE), UConn Chapter

Apr 2025 – May 2026

- Represented 30+ engineering students at regional and national NSBE meetings while facilitating communication between members and executive leadership.
